It's not urgent. I want to head off any problems if I need to back up the image. I created a USB download device for Acronis. Since the previous one will not be named backup product I had an extremely difficult time rebooting back to Windows 10 after restoring the mirror image due to my solid UEFI drive. Changing the download order requires access to the BIOS menu and a return to Legacy Download options to allow the device, other than the internal hard drive, to load. What is the procedure for Acronis? I would be more comfortable if I had a description of the procedure and known possible questions in advance. I didn't find anything in the knowledge base. I've been using the Acronis True Image since the 2014 version, and here are a few thoughts. If you're backing up an emergency recovery, do so when the operating system isn't working. This ensures that you get all the files, as none will be downloaded and blocked. Either set it up to back up to download before the OS starts (I haven't figured out how to do it with ATI 2019 yet), or download from the emergency recovery drive. This is probably your best bet, as it ensures that recovery is possible. For example, I have two computers, my home desktop and an HP Pavilion laptop. Both work for Win10 and work for UEFI. Downloading from the ATI 2019 recovery drive has never been a problem with a desktop computer, but an endless disappointment with the laptop. I finally figured it out. In addition to having a DVD drive installed at the top of the download drive order, you should have a SECURE DISABLED download in a BIOS SETUP. It was a very won lesson which I hope will benefit others. Albert I think you can use Rufus for this. You can't use Rufus as I stated I tried and he doesn't see ext HD just USB thumbdrives. DannyL I wish it would work, but iso I have just a version based on dos that doesn't have all the features your link provides. I guess I'm looking for more for a way to take any ISO ad that makes it bootable on Ext HD in UEFI mode. Janderson86 wrote: You can't use Rufus as I stated I tried and he doesn't see ext HD just USB thumbdrives. It's really weird as I am, for example, thinkPad Stack is an external drive that has several ISO of our products on it. If you click alt+f in Rufus, don't you see your external drive as an option? Try Clonezilla will work from any of: USB stick, DVD and CD. It will work and after going through a series of steps during which you take default, if I remember correctly, you get a step where you are asked to connect external storage to the image and then connect the external HD connected through the USB cable, wait a minute until it him, and then continue. You have to have no difficulty image HD. You can use rufus, you just need to have it look at THE FREE USB discs first. To do this, just click on Extended drive properties and then include a list of USB hard drives may be misinterpreting your requirement. Is that on that 1TB external HD connected via USB lead to Dell Optiplex do you want to install a cloning and storage program for the image when you run it? If so, I may maybe be thinking of other solutions. Bought by Salman some time ago, which is an HDD case that can emulate a USB DVD player. Really useful device. just install it with your ISO and can flick through the one you want to boot from right on Salman. You can set it up to put on a DVD, HDD or even both. Its like holding 100 ISOs in your pocket. Rufus! Made my life easy this summer! Use Easy2Boot.That's what we use on all our window boot drives. It can also be configured to use multiple ISOs, we have ISOs from XP in general to Win10 including WinServ and Linux on one of our download drives. It's the boots in the E2Bs boot menu and you choose iso from there. It has a small learning curve, but after getting the hang of it you can just drag and drop ISOs into the designated folders and E2B takes care of the rest. You can even have it automatically installing product keys to save a few steps. AND HIS FREEEEEEEEEEEE! I believe there is even a way to use it for Mac installs like. DMG and HFS- Pendrive Linux I used this to download Acronis Snap Deployment ISO for cloning drives. Worked flawlessly I use Easy2boot on a 128GB USB flash drive. It also works on external hard drives. I used it to download iso image of Acronis backup CD download, and it works perfectly. Went around and around with this for a few days, with Acronis and Clonezilla. Eventually I was able to get Acronis True Image 2018 to work on the bootable USB External Drive on UEFI, and it was much faster to use day in and day out than Clonezilla. Looks like I was given a bad copy of the 2015 download, and once I got the 2018 version we were good to go. Thank you all for your help and ideas. Find out more you can create a life-saving download media - an autonomous version of Acronis True Image 2016, which can be used to download a crashed car or car without an operating system and restore the image of your system. Follow these instructions to create a downloadable media. On the computer WindowsAcronis 2014 Bootable UsbSelect media to be used as a downloadable media: connect a USB flash drive to your computer or insert a CD/DVD. Launch the product and click the tool sign - Rescue Media Builder: Choose Acronis bootable media rescue: Choose the type of media. Click Continue: Saad, all Acronis bootable media will work with both Legacy/MBR and UEFI/GPT systems, so the option has always been available. See KB 59877: Acronis True Image: how to distinguish between UEFI and Legacy BIOS download modes from Acronis Bootable Media. Saad, all Acronis bootable media rescue will work with both Legacy/MBR and UEFI/GPT systems, so the option was always available. See KB 59877: Acronis True Image: how to distinguish between UEFI and Legacy BIOS download modes from Acronis Bootable Media.On a Mac (!) We strongly recommend creating a downloadable media immediately after the first backup; when you sleep in an operating system, the only way to recover it is to recover from a downloadable media. Media downloads can only be created if the machine has a Recovery section. Acronis True Image 2016 Create a Bootable UsbConnect removable drive on your Mac. The drive should have 4GB (or more) of free space. For example, you can use an external hard drive or USB flash drive. Please note that CDs and DVDs are not supported. Open the Acronis True Image.In file menu, click Create Rescue Media: Acronis Media Builder window opens. Choose the drive you want to make bootable: Click Create Media.We encourage you to create a new lifesaving sme every time you upgrade your Mac OS X to a new version. Otherwise, your rescue media may not work properly. Acronis True Image UsbTags: This article explains how to figure out whether Acronis Bootable Media Boots is in UEFI mode or Legacy BIOS. Keep in mind that downloadable media must be downloaded in the same mode as your system in order to properly perform the recovery or clone the operation. The system download mode is displayed during the initial download of the machine: In Windows 8 and 10, you can also check download mode using system information: 1) Click Win'R, type msinfo32 and click Enter to open system information 2) Look for login into BIOS mode. If your computer uses BIOS, it will display the display If it uses UEFI, it will display UEFI. WinRE/WinPE description based on Linux media (default) based on Bootable Media 1. WinRE/WinPE Media-Based (default) If you choose the second option in The Wizard of Rescue Media Builder, Winpe-based media with Acronis Plug-In, discovering whether it is launched in UEFI

mode or Legacy BIOS/CSM is different. WinPE-based media downloads look the same in both UEFI and Legacy BIOS modes. The difference can only be said by looking in the registry after the Acronis True Image main window appears (steps 6 and 7 in the table below). Click here to go to the instructions. Download stage UEFI download mode Legacy BIOS/CSM download mode 1. WinPE Loader launches Click any key to download from a CD or DVD... Text is displayed 2. Wednesday WinPE launches Windows Logo 3. WinPE launch scenarios performed by wpeinit displayed 4. The Acronis True Image WinPE app runs on trueimage_starter screen 5. Acronis True Image is ready to use Acronis True Image Window 6. Close the Acronis True Image window by clicking on the red cross in the right corner of the window. Don't confuse it with a black command tip - the black window should be open 7. Click on the team's black hint box, enter the regedit then click Enter on the keyboard to run the registry editor to regedit command 8. Browse HKEY_LOCAL_MACHINE-SYSTEM-CurrentControlSet-Control and look at the value of PEFirmwareType 2 meaning that UEFI 1 download mode means Legacy BIOS/CSM download mode 9. To access Acronis True Image again, tap the Up and Down arrows on the keyboard to return the command to the command request, and then tap Enter on the keyboard to open the Acronis True Image 2 window. Linux-based Bootable Media Table below illustrates the process of downloading Linux based on Bootable Media. You have this type of media if you chose the first option, Acronis Bootable Media, in Rescue Media. Just by looking at how the media starts, you can tell whether it's downloading in UEFI mode or Legacy BIOS/CSM. Download stage UEFI download mode Legacy BIOS/CSM download mode 1. Acronis Loader Initiates Starting... UEFI Loader is displayed Starting Acronis Loader displayed 2. Acronis Loader downloads menu Black and White menu download Colorful Menu Downloads 3. Acronis Linux Wednesday runs Please wait ... Text appears Logo and Patents 4. App Acronis True Image Linux launches download app, please wait... 5. Acronis True Image is ready to use the Acronis True Image acronis uefi boot iso download
